

## A histopathology partnership for Coroners

Source LDPATH is an industry leading cellular pathology service providing end-to-end histopathology services, including digital pathology and AI through to molecular diagnostics.

Our state-of-the-art facilities and clinical expertise enable processing of over 265,000 histology cases per annum\*.

### New Service Announcement: Wets-to-Slide

Partnership between Coroners and Source LDPATH:

1. The Coroner selects the tissue for processing and send cassette-sized specimens to the Source LDPATH laboratory on Day 0.
2. Upon receipt, the cases are individually booked in, handled by an expert team of Biomedical Scientists in dissection and sent for tissue processing.
3. Embedding, microtomy, staining and quality control takes place on Day 1.
4. Regular meetings between Source LDPATH customer support and the Coroners team ensures streamlined communication and facilitates a smooth working relationship.
5. All slides and blocks are returned to the customer for reporting.
6. Additional testing (special stains, IHC, molecular) is also available, if required.

\*2022 data on file.

## How can we support you?

- Utilise our expert team of Biomedical Scientists for sample processing
- Ensure your samples are returned for reporting at market-leading turnaround times
- Easy sample transportation process using our courier network
- Provide clear lines of communication between our laboratory and your team

“ Advances in medical science have brought many benefits to the field of forensic pathology but one unwelcome side effect is the delay in getting test results to hand. Since the beginning of this year, we have managed to eliminate a six months backlog of histology tests by partnering with Source Bioscience at no additional cost for this excellent service. We now have a turn-around time of about two weeks.”

**Frank O'Connell**, Coroner for South & West Cork
